

SUSTHIRA the solar inverter

This prototype is mainly designed for people living in the remote parts of India..example coorg....

This prototype helps even students take classes away from homes if connectivity is an issue.....

It produces a power of around 300 watts which can be able to run laptops .

We may think what about rainy season.....but this prototype is waterproofed upto 2 inches of rain and ...believe it or not charges in rains as well.

Ideal for camping as well as the device is charged up in the morning n has a battery backup which can be used at night
